

LightSquared should be banned from using the frequency that is adjacent to the GPS band. Those frequencies were reserved for low power satellite use that would be compatible with the GPS system. The use that is planned by LightSquared is not compatible with the presently operating GPS system. If LightSquared's system is turned on, it will destroy the functionality of a system that is necessary for the safe operation of aircraft in the United States. In addition to the aircraft, many others are using it with full expectation that the accuracy will continue to be available. The users include emergency service personnel (Police, Fire, Ambulance), survey, agriculture, boating, personal travel and many others.

The fact that LightSquared has been provided with Hedge-fund money shouldn't guarantee that they can destroy a whole segment of the US economy for their benefit. They should seek out a non interfering frequency that won't interfere with any present users or take their losses like any other gambler which is what Hedge-fund's are, along with the people who give them money to gamble with. You make your bet, you loose, that is the way it is. The world doesn't need to be guaranteeing them anything.
