

It is apparent from tests that Lightsquared's 4G system and GPS are fundamentally incompatible. If technical fixes are possible on the GPS side, the public will need a 20 year phase-in period, unless Lightsquared is funding the equipment changes.

Impacts if GPS is disrupted will be catastrophic. I use GPS to find local businesses and suppliers. It is used by emergency response professionals in my area.

I have GPS units in 2 cars and depend on them for navigation to new locations, when traveling for business, and when road closures force an unplanned detour.

I have dual GPS units in a personal aircraft, and loss of that capability would impact navigation every day, make identification of restricted airspace more difficult, and in an emergency situation would be life threatening.

Please take whatever steps are necessary to protect the integrity of the GPS system.
