

I am a land surveyor licensed in Massachusetts who utilizes precision GPS equipment on a daily basis at Green International Affiliates, Inc. in Westford, MA. We have spent over \$50,000 for GPS receivers and related equipment. To lose the use of precision GPS would be a detriment to our survey business. I don't trust a "for profit" company to live up to its word and upgrade our equipment without costing us time, money and productivity. I don't believe we should have to spend additional funds to upgrade existing equipment or purchase new equipment. I believe Lightsquared should modify their technology to work in harmony with GPS.
