

In regard to Light Squared use of the electric magnetic spectrum:

I am an active user of GPS enabled equipment for everyday use as well as professional use as a Paramedic and Member of a Search and Rescue origination.

To locate address and coordinating location of lost injured persons by rescue services during emergencies. I all so rely on use of GPS for assistance in location and electronic approach of airfields by search aircraft. I feel any loss in the integrity of the GPS system by Light Squared or other users can and will create problems for both the S&R community as well as Aviation in the US

Thank You

James Reed
