Re: LightSquared Working Group -- IB Docket No. 11-109

Dear Ms. Dortch:

As a business professional responsible for developing a pro-job environment in New York State, I know how important innovation, like that being offered by LightSquared's 4G-LTE wireless broadband satellite network, is to our nation's economy.

While I do not endorse any particular company, it is my understanding that LightSquared's integrated wireless broadband and satellite network will generate over 15,000 jobs during its initial build out. With the company planning to invest billions of dollars in infrastructure, it could be a tremendous boost to our nation's economy.

I have read that the company's 4G-LTE network will provide coverage to 260 million Americans by 2015 and that it has the ability to provide uninterrupted service during power outages and other emergencies. In addition, the inherent competitive nature of this wholesale network will most likely help average Americans participate in an information revolution being driven by wireless communications.

There are still issues to address as our county moves forward with new and innovative wireless technologies; I do want you to know that I support you as you take on this difficult, but exciting challenge.

Thank you for your time and consideration.

Sincerely,

Mike Relyea
