RE: Lightsquared Subsidiary LLC. IBFS File No. SAT-MOD-20101118-00239

Dear Ms. Dortch,

It is becoming a more common place in today's society to rely on using GPS in some form each day. This technology has advanced to become a practical application for land surveyors, engineers and contractors nation wide who use GPS for gathering data and obtaining highly accurate measurements for both the private and public sectors. As a professional land surveyor, I depend on using GPS for the majority of our company's projects and work together with county and state agencies to provide a more universal user data base created to streamline information technologies for the benefit of the general public. Needless to say this information needs to be accurate.

I have read numerous articles and several other correspondences opposing Lightsquared's projected agenda to operate high powered broadband transmitters near the GPS spectrum. It is most concerning when several of these letters and publications are drafted from government agencies warning that studies conclude the potential interference risks to all GPS users.

It seems overly burdensome for thousands of existing GPS users to lose the use of this technology as a result of signal interference caused by a single organization or be required to resort to other methods if more options exist that would not create this conflict. Please consider the option of Lightsquared using a different spectrum that would not impact the GPS signal.

Sincerely,  
Scott Hewitt

iGuide Robotics, Inc.  
11711 N. College, Suite 160  
Carmel, Indiana 46032

To whom it may concern:

Our business is based on supplying GPS coordinates to mowers at 50 times a second. Approval of the light squared application will cause interruption in our supplying these coordinates and could be dangerous and cause injury to many persons and eventually erode our business causing huge losses for our young start up company and the loss of many hundreds of employees.

We understand Light Squared is making large political contributions to make this happen, but we are hoping that the FCC is above that political influence.

Thank You,

Sincerely,

  
Thomas A. McCalley, President  
iGuide Robotics, Inc.

RE; LightSquared proposal

To whom it may concern,

As a small business owner in the land surveying field, I am amazed that the FCC would consider doing anything that might be detrimental to our ability to fully use the expensive equipment we have previously purchased. The use of our GPS equipment has helped to decrease what the public has to pay for their survey work. If as I understand the LightSquared proposal, there would be a very negative impact on our ability to use our GPS equipment. The State of Wisconsin and many other states have spend large amount of public funds to improve the GPS equipment function. Please do not allow this project to move forward. Thank you for your consideration.

Robert F. Reider, PLS
