

Our communications system CAN'T fail in an earthquake.

Our communications system CAN't fail in a tsunami.

Our communications system CAN't fail in a hurricane.

Our communications system CAN't fail in a terrorist attack.

Our communications system CAN't fail in a local or national disaster.

In the 1990's we developed, and began receiving patents on, our software-only peer-to-peer ad hoc network technology.

Now that mobile carriers are in a capacity crisis, disasters are increasing in volume and budgets are tight; our technology has been proven to be the right resource at the right time.

Our products are in use in over 60 countries. We were the first out with an emergency App for the Japanese tsunami, delivered by Apple Computer. A version of our software is the number one Regime Change-ware in the world and has helped turned the tide in major conflicts against dictators.

Can you provide us with email contacts for emergency communications officers that you are aware of that should be updated on our tools?
