

RM-11306

I do not support RM-11306, I use both CW and most digital modes there is a clear need for separation between CW and digital stations so as not to cause interference, the lower end of the frequency would be best for CW, above CW should be digital like it is on 20 meters as a good example While I agree there should be some changes made it should be to assign a place for both.

Sincerely Yours:

William J. Kornahrens K4REB
