Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Josephine Huerta

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

I think that it is critical that we ensure that consumers have the choice of both wireline and wireless broadband Internet access.

I urge the FCC and Congress to only accept a proposal that includes a fair share of federal support for mobile wireless broadband in rural America.

All Americans deserve access to the latest mobile broadband technology. Having dependable on-the-go Internet connectivity is vital in today's world. It improves public safety, bolsters economic development, and allows us to stay connected and share experiences with the people who matter most in our lives. Rural citizens deserve these benefits just like everyone else.

I don't disagree with the goal of bringing broadband access to as many Americans as possible. However, I want to ensure that consumers have the choice of both wireline and wireless broadband Internet access. Please make sure that the USF reform includes adequate funding for mobile broadband so that rural citizens can experience the benefits of on-the-go Internet access that the rest of America enjoys.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural

citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Please only accept a proposal that includes a fair share of federal support for mobile wireless broadband in rural America. Thank you,

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Erica Ayala

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Lindsay Bremer

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

As a graduate of Ohio University's McClure School of Information and Telecommunication systems, I've spent time studying the economics and impacts of regulatory reform. As a consultant to and now manager within the telecommunications industry, I've seen first hand the impact that access to telecommunication technologies can have on the American public, your constituents.

As you know, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

The economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Antonia M. Fico

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Being a telecommunications professional, mobile broadband is the fastest growing way of accessing the Internet. It is imperative that we grow this availability to all those that need it, even if that is in a rural area, and most likely where it is needed most. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

I have several family members in Law Enforcement in rural areas of the United States, who use their personal wireless phones during off hours to communicate with work about developing situations. As deputies and social workers they need to be kept informed as situations develop and need to be able to get status on inmates or clients in distress.

Inadequate investment in mobile broadband will compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Julie Miska

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Matt Hogue

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

The most effective way to add broadband to rural areas is through mobile (cellular phones and computers) Landlines are a dying breed why would the Government want to spend significant dollars on an old technology. I expect better from smart Congress persons rather than spending our hard earned dollar on something we don't need.

Hopefully you agree and will see to it that the money is spent on rural cellular functionality.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Kristen Simms

Dear Chairman Genachowski:

I am concerned that an upcoming decision by the FCC to reform the Universal Service Fund to provide improved access to broadband in rural America may not do enough to promote the deployment of mobile wireless broadband Internet. All Americans need dependable access to broadband, both wired and wireless, to compete in this fast-changing world. But we need to make sure this reform is done right. There needs to be a fair share of funding allocated for mobile broadband expansion.

A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. A recent CTIA study found that mobile broadband expansion can work successfully with an investment of \$1 billion per year - that's less than one-quarter of the total Connect America Fund. Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

At this time, mobile broadband is the fastest growing method of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; I understand that there will be a REQUIREMENT in just a few years for all phones to have GPS for easier location of those individuals.

Farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Additional benefit to law enforcement, emergency responders and every individual traveling in rural areas: Travelers breaking down or getting lost or stranded with their cars in the middle of nowhere would have it easier getting assistance, and could feel safer knowing where they are and how to get from A to B without having to call for help, hence tying up those precious resources.

The economic impact of mobile broadband: A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

Yet, I understand there are proposals under consideration that would seriously underfund mobile broadband deployment with up to 93 percent of available funds being directed to wireline broadband.

Right now, mobile broadband is the fastest growing way of accessing the Internet. First responders and law enforcement depend on wireless networks to quickly pinpoint the location of a victim or a crime; farmers use mobile broadband to track shipments and complete transactions without having to leave the fields; and businesses use it to stay connected to employees and customers.

Furthermore, the economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invest \$1 billion per year in mobile broadband over the next 10 years, 150,000 new American jobs could be created.

Inadequate investment in mobile broadband will cost our nation jobs and compromise the ability of first responders and law enforcement to act quickly when timing is critical. If the Connect America Fund does not appropriately account for wireless, the safety and prosperity of our rural citizens will be diminished.

Rural citizens pay into the Universal Service Fund and deserve to see the benefits of mobile broadband investment. Utilizing \$1 billion out of a \$4.5 billion fund for wireless broadband is not too much to ask.

I urge you to ensure that reform of the Universal Service Fund includes a fair share for mobile wireless broadband networks. Rural America simply cannot afford to be left behind.

Sincerely,

Nicholas Nottoli

Dear Chairman Genachowski:

I am concerned about a proposal under consideration by the FCC that would severely limit mobile wireless broadband expansion in rural communities in favor of outdated landline technology. While it is critical to provide broadband service to more Americans, we cannot afford to waste scarce resources on yesterday's technology.

As I understand it, \$42 billion of universal service support would be used for landline broadband, leaving just \$3 billion to invest in mobile broadband over the next 10 years. That's \$14 spent on landline networks for every dollar invested in mobile broadband networks. At a time when our President and FCC Chairman have repeatedly spoken about how important it is for rural Americans to have access to high-quality mobile broadband networks, this allocation of resources is unacceptable.

Making matters worse, the proposal would allow the landline companies to pick and choose rural areas they want to serve with wired broadband, and those areas would not be eligible for funding for mobile broadband. Landline companies should not be able to choose what broadband technology is made available to rural consumers. That decision should be made by consumers.

Right now mobile broadband is the fastest growing way of accessing the Internet. If you consider where we could be 10 years from now, why would our government propose to spend \$42 billion building fixed wires in rural America? These funds could instead be used to build mobile broadband that would deliver more services, to more places, and be of more use, to more people.

The economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invested the same \$42 billion in new wireless broadband networks, 630,000 new American jobs would be created. Rural businesses need to have mobile wireless access to compete in this global economy.

Furthermore, emergency responders depend on wireless broadband networks to pinpoint and rescue victims in emergencies. Every time one mobile broadband site is built, our nation's Emergency Response Network is strengthened.

I urge you to prioritize mobile wireless broadband over outdated landline technology in any reform of the Universal Service Fund. Rural America simply cannot afford to be left behind.

Sincerely,

Seiji Oyasu

Landline companies should not be able to choose what broadband technology is made available to rural consumers. That decision should be made by consumers.

I'm originally from Lincoln, Nebraska, and currently live in Chicago. When I take Amtrak home, I've noticed that wide swaths of Illinois, Iowa, and eastern Nebraska don't have good cellular reception, let alone modern broadband internet access. This matters for not just the rural folks in this area, but also those of us in larger cities who travel in these areas.

I urge you to prioritize mobile wireless broadband over outdated landline technology in any reform of the Universal Service Fund. Rural America simply cannot afford to be left behind.

Thank you for considering this important issue,

Making matters worse, the proposal would allow the landline companies to pick and choose rural areas they want to serve with wired broadband, and those areas would not be eligible for funding for mobile broadband. Landline companies should not be able to choose what broadband technology is made available to rural consumers. That decision should be made by consumers.

If you live in a rural areas and need service for our homes and the farmer to have service done, the service people has to work out in the boonies to give that service, they need mobile cellphones to contact their base instead of having to run back and forth, thus saving time and money. Also, many of our citizens has to drive an average of 30 miles one way to work. Many are on the evening and night shifts and a auto breakdown could cost the life of your wife or daughter due to the crime element that seems to be progressing in our Country. Mobile cellular phones is the only hope they might have. What is being proposed by the FCC is a 19th century approach of addressing the citizens voice communication abilities in cheapest manner. Our nation has suffered enough economically for the lack of mobile communication. Now is the opportunity to right that wrong by rethinking what FCC wants to do and place that \$45 billion dollars in the hands of the mobile broadband developers. For our citizens mobile broadband is the fastest growing way of accessing the Internet. If you consider where we could be 10 years from now, why would our government propose to spend \$42 billion building fixed wires in rural America? These funds could instead be used to build mobile broadband that would deliver more services, to more places, and be of more use, to more people.

Dear Chairman Genachowski:

I am concerned about a proposal under consideration by the FCC that would severely limit mobile wireless broadband expansion in rural communities in favor of outdated landline technology. While it is critical to provide broadband service to more Americans, we cannot afford to waste scarce resources on yesterday's technology.

As I understand it, \$42 billion of universal service support would be used for landline broadband, leaving just \$3 billion to invest in mobile broadband over the next 10 years. That's \$14 spent on landline networks for every dollar invested in mobile broadband networks. At a time when our President and FCC Chairman have repeatedly spoken about how important it is for rural Americans to have access to high-quality mobile broadband networks, this allocation of resources is unacceptable.

Making matters worse, the proposal would allow the landline companies to pick and choose rural areas they want to serve with wired broadband, and those areas would not be eligible for funding for mobile broadband. Landline companies should not be able to choose what broadband technology is made available to rural consumers. That decision should be made by consumers.

Right now mobile broadband is the fastest growing way of accessing the Internet. If you consider where we could be 10 years from now, why would our government propose to spend \$42 billion building fixed wires in rural America? These funds could instead be used to build mobile broadband that would deliver more services, to more places, and be of more use, to more people.

The economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invested the same \$42 billion in new wireless broadband networks, 630,000 new American jobs would be created. Rural businesses need to have mobile wireless access to compete in this global economy.

Furthermore, emergency responders depend on wireless broadband networks to pinpoint and rescue victims in emergencies. Every time one mobile broadband site is built, our nation's Emergency Response Network is strengthened.

I urge you to prioritize mobile wireless broadband over outdated landline technology in any reform of the Universal Service Fund. Rural America simply cannot afford to be left behind.

Furthermore, emergency responders depend on wireless broadband networks to pinpoint and rescue victims in emergencies. Every time one mobile broadband site is built, our nation's Emergency Response Network is strengthened.

I encountered this specific issue while leading a Scout troop along the Ice Age Trail in Wisconsin. One of the scouts sprained his ankle, after our original first aid was proving to not be sufficient for his injury, we attempted to call...spotty coverage. We got to a county road intersecting the trail...clearer coverage, but a long delay in explaining where we were. With mobile broadband access, our location, our situation, and real time clear data could have been directly sent to the emergency responders. Cutting down on response time, and making a huge difference had our injury been life threatening.

These aren't issues in urban areas, and why should they be issues anywhere in this great country.

I urge you to prioritize mobile wireless broadband over outdated landline technology in any reform of the Universal Service Fund. Rural America simply cannot afford to be left behind.

Right now mobile broadband is the fastest growing way of accessing the Internet. If you consider where we could be 10 years from now, why would our government propose to spend \$42 billion building fixed wires in rural America? These funds could instead be used to build mobile broadband that would deliver more services, to more places, and be of more use, to more people.

The economic impact of mobile broadband is astounding. A recent report by Deloitte projects the creation of 15,000 jobs for every \$1 billion invested in mobile broadband. If we invested the same \$42 billion in new wireless broadband networks, 630,000 new American jobs would be created. Rural businesses need to have mobile wireless access to compete in this global economy.

Furthermore, emergency responders depend on wireless broadband networks to pinpoint and rescue victims in emergencies. Every time one mobile broadband site is built, our nation's Emergency Response Network is strengthened.

I urge you to prioritize mobile wireless broadband over outdated landline technology in any reform of the Universal Service Fund. Rural America simply cannot afford to be left behind.

Sincerely,

Carolyn Grisko

Dear Chairman Genachowski:

I am concerned about a proposal under consideration by the FCC that would severely limit mobile wireless broadband expansion in rural communities in favor of outdated landline technology. While it is critical to provide broadband service to more Americans, we cannot afford to waste scarce resources on yesterday's technology.

As I understand it, \$42 billion of universal service support would be used for landline broadband, leaving just \$3 billion to invest in mobile broadband over the next 10 years. That's \$14 spent on landline networks for every dollar invested in mobile broadband networks. At a time when our President and FCC Chairman have repeatedly spoken about how important it is for rural Americans to have access to high-quality mobile broadband networks, this allocation of resources is unacceptable.

Making matters worse, the proposal would allow the landline companies to pick and choose rural areas they want to serve with wired broadband, and those areas would not be eligible for funding for mobile broadband. Landline companies should not be able to choose what broadband technology is made available to rural consumers. That decision should be made by consumers.

If we invested the same \$42 billion in new wireless broadband networks, 630,000 new American jobs would be created. Rural businesses need to have mobile wireless access to compete in this global economy.

When traveling through rural areas of Illinois and Michigan, or on vacation, I'm frequently unable to use email or access the Internet. Few people have just 9 to 5 jobs anymore; we have to stay connected to work at all times.

Furthermore, emergency responders depend on wireless broadband networks to pinpoint and rescue victims in emergencies. Every time one mobile broadband site is built, our nation's Emergency Response Network is strengthened.

I urge you to prioritize mobile wireless broadband over outdated landline technology in any reform of the Universal Service Fund. Rural America simply cannot afford to be left behind.
