

I have a programable weather/EAS radio in my home. Prior to the National Alert Test I programmed the radio to receive all EAS alerts on the audible and silent settings. When the test was under way the radio never activated. My concern is that if a national alert comes out in the middle of the night people will not get the alert/information unless they are tuned into the am/fm radio or the television. Is there anyway to ensure that the alerts are going to be broadcasted on the weather radios?
