

Please consider how the loss of Network Neutrality due to a loss of competition/consumer choice (and loss of competition) and open access to the internet would affect real-time electronic communications via Facebook, Twitter, LinkedIn etc. Don't allow more telecommunications mergers giving big telecom unprecedented economic and political power to censor the internet and internet technologies that threaten their outdated business models (like VOIP putting AT&T's phone services of out business or IPTV threatening digital cable TV provider's cable TV business) to proceed. That includes blocking AT&T T Mobil which I've filed comments against in the docket regarding that merger.
