

I am a Professional Land Surveyor and Mapper in the State of Florida. I use GPS in my practice to acquire precise measurements in my practice. This is a very critical tool in my occupation that allows me to keep the necessary qualities and accuracies of the information as required by my clients, both private and governmental. The informational accuracies I provide are necessary, as the technologies grow and require real world positioning of my information I provide. I appeal to you to not allow Lightsquared plan not be allowed to progress any further without proof their systems will not affect my GPS units accuracies on any level. The reports I have read on the tests by the Federal Government have already stated that it is the Lightsquared plan catastrophically affects over three-quarters of the GPS units currently available.
