

As a Professional Engineer and Surveyor that employs GPS technology on a constant basis I oppose Light Squares application to encroach upon the GPS band width with their end-run around an organized system. The GPS bands were allotted in an open, proper, public manner to ensure these important radio low power frequencies were protected.

Now Light Squared has created powerful network and is in the aftereffect is bullying itself into the GPS waves. Further their testing showed that adding their contracted consultants show a filter added to the GLNS receiver will almost eliminate of the interference. This system is not used by most American GPS receivers. Independent testing has shown that Light Square will interfere with most American GPS receivers. The FCC should reject this ill-advised, publicly adverse, unfriendly, greedy attempt to pervert the systematic allocation of public airwaves.
