

hi,

I am someone who has had cable, Dish Network, and Direct TV and have gone back to using an antenna for the first time in my life (I grew up with cable). Set-top boxes are horrible and provide very little function. I would like the FCC to keep cable companies broadcasting in clear-QAM. I also would like the FCC to require a wider selection in clear-QAM. When I look at cable, a number of the clear-QAM stations are also not in HD, which is a major issue.

I also feel that the FCC should require satellite companies to broadcast clear-QAM stations. I understand there are some technical challenges to this, but I can think of some ingenuitive solutions that could be done which would greatly increase the ability for rural areas to get better access to cheaper TV.
