

I work for a real estate company, I use GPS consistently to help me navigate to properties of interest. Personally, I use GPS all the time for recreational fishing.

If GPS were unavailable, it would create a huge inconvenience.

While more capacity for wireless broadband services is important, it should not come at the expense of GPS, which is critical to our country's economy.

All of the engineering studies conducted, including those recently released by the government agency in charge of federal radio spectrum management, clearly show that LightSquared's proposed network causes interference and that there are no remedies to fix this interference.
