

GPS: I use GPS on my boat and in my car. I've been on the bridges of cruise ships and they use GPS. For me, in the Channel Islands of California, fog can set in quickly and without GPS I could be lost in a fog bank and that could be a life and death event without GPS. So many people use GPS to navigate boats and find their way in cars, that nothing can be allowed that will interfere with our GPS signals. With gas prices going through the roof, the GPS gives people the shortest route (over water and over land) and helps keep the use of petroleum, products down. Letting one company, Light Squared, plans interfere with all that is bad for so some people. Please do not allow there projected plans go forward and damage my GPS use.
