

I use my GPS for on the water navigation and as a part of my volunteer work with the Coast guard Auxiliary. IF GPS were not available due to radio frequency interference, I would be unable to participate in search and rescue activities and help save lives.

Wireless broadband service is important, but it should not come at the expense of GPS.

All the studies show that LightSquared's proposed network would cause interference and that there are no remedies.

I rely on the FCC to protect the integrity of the GPS signal and I support the recommendation to stop LightSquared's current proposal.
