

I use GPS for my job in my car as traveling salesman during the week and on the weekends and vacation cruising with my 32' boat I rely on good GPS now that the Loran system is gone. Good GPS is invaluable for me as to income and safety

If GPS became unavailable or unreliable it could cost lives when trying to get to a safe haven/harbor. As a "smart" phone user I understand that wireless broadband service is important, but it should not come at the expense of GPS.

The test and previous studies show that LightSquared's proposed network would cause interference and that there are no remedies.

I rely on the FCC to protect the integrity of the GPS signal and I'll support their recommendation to stop LightSquared's current proposal.
