

Please protect the GPS signal from degradation by the proposed LightSquared network.

I have welcomed each improvement in position finding, from RDF to LORAN, and then GPS. Each improvement has made my life safer on the water, and with GPS more convenient on land. I use the GPS service daily, and am able to navigate with safety and accuracy unknown before GPS.

I depend on my government, and its departments, to protect my interests and use good science to determine the proper course of action.
