

I am 70 years old, a lifetime boater on Lake Michigan. Since GPS, my wife & I have toured regularly the entire lake, from Chicago to Mackinac on both sides of the lake and most of the tributaries. My use of secure, reliable GPS serves as a primary tool that allows me to use my boat on a regular, on-going basis, without fear as to my planned destination or changes in destination due to changes in the weather. Please do your best to protect the continuing integrity of the GPS signal, and do not allow LightSquared's current initiative to reduce the viability of this most important tool for boaters.
