

Thank you for the intense testing and objective analysis of Light Squared's request for bandwidth over the last year. GPS has become a part of our daily lives for safely and efficiently getting to our destination on land, in the air, and on the waters. Although not used for primary navigation, GPS has brought an immeasurable comfort factor to being on the water by providing coordinates and life saving Man Overboard chart plotting. I use it everytime I am on the water and always will and hope that infringements to this vital technology will continue to be highly scrutinized by the FCC and disallowed when evidence concludes the efficacy of GPS will be compromised. Thank you for your work and your attention to this crucial matter. Regards, Gary L. Hancock
