

I fully support your recommendation to stop LightSquared's current proposal. I am totally opposed to any technology that would interfere with the accurate function of my GPS devices. I understand that LightSquared's network would interfere with GPS and there are no practical fixes. I depend upon GPS for my family and personal safety and would in no way jeopardize that safety for anything that would possibly cause interference. Please reject LightSquared's network proposal. Thank you. Sincerely,  
Richard Smith
