

I am very concerned about the potential for this company's broadband venture to interfere with GPS signal. I use GPS in both my car, boat and for other applications. Any interference with the GPS signal would be disastrous for myself and most other boaters who depend on GPS for navigation. All studies show that LightSquared's proposed network would cause interference and that there are no remedies. We rely on the FCC to protect the integrity of the GPS signal and I support the recommendation to stop a LightSquared's current proposal. Wireless broadband service should not come at the expense of GPS.
