

I want to comment on this matter because I use multiple GPS devices daily in my life specifically in two automobiles, on my boat and with our smartphones. They are critical to my daily activities.

My daily activities would be disrupted if current GPS technology became unavailable or even unreliable. I think that I would waste time and energy if this were to happen. It could even be life threatening if first responder vehicles did not have use of GPS or accurate GPS systems to respond to emergencies.

Even though I am a wireless broadband service user, I do not think that it is more important than the current reliability and use of GPS technology. Surely in this day and age, another solution can be found without damaging a mission critical technology such as GPS.

From my reading all the studies show that LightSquared's proposed network would cause interference and that there are no remedies. This is unacceptable and the network should be stopped unless some other solution is found and must not impact the integrity of the GPS signal. I am in full support of their recommendation to stop LightSquared's current proposal regardless of what representative, senator, or administration official has committed to LightSquared.
