

My primary use of GPS is on land. When I am hiking in the back country I use GPS to assist in reaching my destination and then getting back to my car. If GPS were to become unreliable my safety and the safety of those with me could be jeopardized.

The use of GPS is pervasive in this country and the world. I should like to address just one use of GPS, navigation. To render the massive use of GPS for navigation unreliable just to provide another broadband service would be very unfortunate.

All the studies show that LightSquared's proposed network would cause interference and that there are no remedies.

I rely on the FCC to protect the integrity of the GPS signal and I support your recommendation to stop LightSquared's current proposal.

Thank you.
