

I use the GPS for pleasure and employment and since the Loran system was removed, ONLY the GPS is left. The public and the Military have nothing else. Almost all of the cars and trucks built today offer, in most cases GPS as a standard feature. The many delivery companies also are high use customers of the GPS. If LORAN was still available, although not as accurate I could see adjustment of allowance of the GPS bandwidth for other products, but once again, IT is all we have and to lose it would become a major lose for the millions of various citizens,

Thanks, Stephen
