

To Whom it may concern,

I am writing to inform you of how important GPS is in my daily life. My wife and I use GPS on our boat 4 days a week, in our autos, and also when out in the woods hunting, or marking trails.

While boating our GPS guides us through dangerous waterways, and more importantly guides I safely back to our home port marina. Our navigation is on an large inland lake, with many turns and bends. The GPS allows us to navigate during dark nights, bad weather conditions, and during periods of dense fog. It is critical that we can depend on the accuracy of our GPS coordinants, and our GPS unit.

Our GPS units in our autos help us safely arrive at destinations, that otherwise would have had us guessing and reading directions, looking for steets and landmarks. Our GPS take the guess work out of this for us. which is a big help as we enter our senior years of life. Again, our GPS units help provide safety to our lifes.

We also use our GPS when in the big woods. It prevents us from getting lost, helps us mark trails, and we can always track back the same way we came into the wood. It is our compass, and trail mapper.

We are relying on you, the FCC, to protect the integrity of the GPS signal. We support your recommendation to stop LightSquared?s current proposal, and to protect us from it. All the studies show that LightSquared?s proposed network would cause interference and that there are no remedies. We do not want "ANYTHING" to degridate the integrity our our GPS quality.

Thank you for allowing us to inform you of how important GPS quality is to our daily lives. Please continue your efforts to protect this for us.

Sincerely,
Robert Dunn
