

I am very concerned about the proposal from Lightsquared's network proposal.

We are boaters who rely heavily on GPS navigation. This proposal could clearly effect our business and personal life if GPS became unreliable.

I agree that wireless broadband service is very important but it should not effect GPS. All the studies show that LightSquared's proposed network would cause interference and that there are no remedies.

We rely on the FCC to protect the integrity of the GPS signal and that we support tyour recommendation to stop LightSquared's current proposal.
