

I use GPS in life daily for work and leisure. I am a real estate agent and GPS has made my work much safer. Listening to GPS directions versus trying to read a map while driving and talking to a client has been revolutionary.

My example is repeated all over the country in so many ways. Please do not allow any person, group, or company gain the ability to degrade this incredible system. We do need spectrum allocated to other purposes but not at the expense of surrounding channels and certainly not at the expense of something like GPS. Please do all you can to protect the publics ability to have and use a robust and reliable GPS network.
