

I am head of Ag R&D for Morning Star packing in CA. We are the largest tomato processor in CA that is also farming almost 10K acres of valuable ground in the San Joaquin and Sacramento valleys. We use various GPS units for mapping fields to RTK for bedding and transplanting to VAR. We are very pleased with decision to block Lighted Square's request for bandwidth in the GPS bandwidth. The use of GPS for our farming operations has saved us an enormous amount of time and expense.
