

How do you I use GPS in all facets of my life ??? on the water, on land, or in the air?

My business/personal life if GPS would come to an end, and on the water, lives would be lost.

Any and all Wireless broadband service is important, but it should not come at the expense of GPS.

I have read numerous articles that LightSquared???'s proposed network would cause interference and that there are no remedies.

Why have we come from approx. 1989 with GPS making the world safer to this bull crap. this is not about Politics, its about saving lives and in this case probably putting a lot of businss's out the door, to go backwards,

Then the Military use goes out the door and our National security and again lives a re at stake.

If you allow this to happen, you may see a backlash never seen before and from all walks of life..

I have relied on the FCC since 1969 when I started in the boating business and you have always done the right thing. You have never waived on Licenses etc. why would you do this... rely on them to protect the integrity of the GPS signal and I support your recommendation to stop LightSquared???'s current proposal.

Thank You!!!
