

My wife and I are recreational boaters who rely heavily on GPS for safely navigating our boat in the eastern ocean of our fair country. Loss or compromise of GPS would put our lives and the lives of our friends and family on board at substantial risk. Wireless broadband service is important, but it should not come at the expense of GPS. All the studies show that LightSquared's proposed network would cause interference and that there are no remedies. My wife and I and most of all American boaters rely heavily on GPS and consequently rely heavily on the FCC to protect the integrity of the GPS signal. We support your recommendation to stop LightSquared's current proposal that will aberrate the GPS signals we need.
