

GPS is very important to me. As a catastrophe insurance adjuster, I have been able to find my clients when all of the street signage has been destroyed. I also use it for safe navigation of boats that I deliver. The idea of deliberately allowing use of a frequency spectrum that will degrade the operation of GPS is insane. The population of the United States is already way too dependent on GPS. If this proposed use of this frequency spectrum is allowed to go forward, The FCC will be responsible for what will end up resulting in thousands of deaths of US Citizens. Please do your jobs and protect the citizens of this country.
