

How can you possibly consider negatively effecting the GPS system for the benefit of a single private company. Broadband is and will continue to be an important technology, but any solution should not adversely effect the GPS system, or any other system. That is your job! Since there is a problem you must not approve LightSquared's request. Many millions of users, from all walks of life, depend upon the GPS system everyday. The GPS system provides crucial information for pilots, drivers and boaters throughout the entire country. In many instances it provides lifesaving information. If LightSquared wants to provide broadband cell service it must not interfere with any system, especially the GPS system. Do what's right!
