

I am the president of an engineering and surveying business that employs 17 people. We use survey grade GPS extensively for many projects both public and private. If the FCC allows Lightsquared to proceed with a land based network, all information available indicates that it will have a negative impact on GPS systems. This will setback surveying and GPS uses for recreation, navigation, and likley numerous other uses. I strongly urge the FCC to take all actions necessary to protect the GPS network from interference.
