

I teach boating, on board boats, and GPS has made it safer to navigate in all ways, and eliminated many Coast Guard rescue calls. GPS has also made driving cars safer, especially with voice prompts, eliminating the need to try to read a map while driving. Studies have shown that LightSquared's network would cause interference with GPS, and there is no fix for that. Please protect the integrity of our GPS signal. I am just a small fish compared to commercial shipping, rescue operations, commercial airlines, trucking companies, taxis, etc - we all need GPS! Please stop LightSquared's current proposal.
