

Web-Surfing Like it's 1999

AT&T is pushing legislation in Georgia & South Carolina to lower the speed threshold for broadband to an AOL-like 200kbps. That was the FCC definition of broadband in 1999, but is virtually indistinguishable from dial-up today.

Connecting at 200kbps is like...

Cutting your lawn with scissors

Submitting a job application by morse code

Filling your gas tank by eyedropper

200kbps is not good enough for our communities.
Communities need access to real broadband to create jobs.
