

Telephones and all public utilities should be owned and operated by the state at no profit - a non-profit government agency should be regulating and distributing all public utilities. It is the way of the future for reasonable and fair pricing and distribution. Utility companies gouge people and small businesses for profit. Public utilities should not be a profit center. Allowing corporations, or individuals, to profit from basic public utilities such as telephone is a corruption of democracy and basic right to services that should be publicly owned and operated.
