Services for Which CenturyLink Is Seeking Forbearance

LEGACY CENTURYTEL

- *Ethernet Transport* – Ethernet Transport (ET) service is a high speed data transport service that provides point-to-point data transmissions in a fast packet based protocol. ET is available at 11 transport speeds: 10 Mbps, 20 Mbps, 50 Mbps, 100 Mbps, 150 Mbps, 300 Mbps, 450 Mbps, 600 Mbps, 1 Gbps, 2.5 Gbps and 10 Gbps.
- *Ethernet Virtual Private Line* – Ethernet Virtual Private Line (EVPL) service provides the ability to order Ethernet service where a single connection can support multiple applications with varying Quality of Service (QoS). EVPL is available at transport speeds of: 10 Mbps, 100 Mbps, 1 Gbps and 10 Gbps.
- *Local Transport - Synchronous Optical Channel* – Local Transport is a two-way voice frequency transmission path which permits the transport of calls in the originating direction and in the terminating direction, but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz. Local Transport is available at bandwidths of OC3 and OC12.
- *Synchronous Optical Channel Service* – Synchronous Optical Channel Service (SOCS) provides dedicated transport utilizing Synchronous Optical Network (SONET) transmissions standards. SOCS is available at transmission rates of OC3 (155.52 Mbps), OC12 (622.08 Mbps), OC48 (2488.32 Mbps) and OC192 (9953.28 Mbps).
- *Custom Connect* – Custom Connect provides a connection to the Optical Network and a customer's designated premises. Custom Connect may be ordered as switched or special access and is available at OC3, OC12, OC48 and OC192 bandwidth capacity.
- *Frame Relay Access Service* – Frame Relay Access Service (FRAS) is a medium-speed, connection-oriented packet-switched data service that allows for the interconnection of Local Area Networks (LANs) or other compatible end user customer premises equipment for the purpose of connecting to an interstate frame relay network.
- *Asynchronous Transfer Mode Cell Relay Access Service* – Asynchronous Transfer Mode Cell Relay Access Service (ATM-CRS) is a connection-oriented transport

service that is based on ATM technology using fixed length, 53-byte cells. ATM-CRS provides high-speed data transport for bandwidth intensive data, voice or video applications with the ability to interconnect multiple locations using the ATM-CRS network.

- *Video Frame Services – Type II (270 Mbps)* – 270 Mbps Video is provided via one non-compressed video signal with audio offered as an option in increments of two stereo channels. 270 Mbps Video is offered as a switched configuration or a dedicated (non-switched) configuration. The switched configuration may be a point-to-point or multi-point arrangement that terminates on ports of the Telephone Company's video switch. The dedicated arrangement is a point-to-point service for the transmission of video without accessing the Telephone Company's video switch.

LEGACY EMBARQ

- *Ethernet Virtual Private Line* – Ethernet Virtual Private Line (EVPL) service provides the ability to order Ethernet service where a single connection can support multiple applications with varying Quality of Service (QoS). EVPL is available at transport speeds of: 10 Mbps, 100 Mbps, 1 Gbps and 10 Gbps.
- *270 Mbps Digital Video Transport Service (DVTS)* – 270 Mbps DVTS is a broadband digital video transport channel with one-way transmission capability and provides 270 Mbps high quality video. The service may include up to four 20 kHz Audio Engineering Society (AES)/European Broadcasting Union (EBU) digital audio signals.
