

CC&R's limit my ability to assist with disaster response communications. No antennas are permitted at my location and I do not have reliable communications with the repeater group responsible for SkyWarn Tornado Spotting in my county because of the restrictions. Relaxation of anti-antenna components of the CC&R's would allow solid copy and reliable communications. Bottom line: I was unable to report a wall cloud, which is a precursor to a tornado, because of antenna restrictions posed by CC&R's. I'm not asking for the sky, only the first 35 feet above the ground.
