

Please re-think the random day/hour of WRT (weekly required tests) of the EAS, particularly as used by Optimum Communications CATV service. Interruptions during daytime and primetime programming is redundant and plainly ridiculous. If it were just once in a great while, it would be fine, but this provider is doing it several times a week and sometimes several times a day. Compliance with overbearing rules, notwithstanding, this is flatly annoying and leads the public to ignore such warnings/alerts. While it is necessary to test such systems for readiness, no one needs to be inconvenienced by operators who can't seem to do it right in the first place. Please investigate and re-do the test scheduling and methodology for the sake and sanity of all. BTW - Form 2000D isn't long enough to list the numbers of incidents of this. Thank you.
