

Dear Federal communications Commission,

I am a proud listener of WBFC-LP 107.5 licensed to Boynton, GA. I live in Rossville, GA and I have problems picking the signal up inside my house. Typically, the only time I can listen to this station is while I commuting. I support the FCC's proposed 250 watts so I can listen to WBFC-LP inside my home and enjoy their programming even at home!

Also, you have asked that we (listeners) comment on a great number of points that might benefit LPFM ownership. I am behind everything good for LPFM radio and oppose anything that does not help LPFM broadcasters.

I am asking the FCC to allow LPFM stations to improve their power to 250 watts specifically, and improve all FCC rules to make the most of LPFM stations. WBFC is the only local station that sounds professional, does not seek to make a lot of profit off of its listeners, and has the best volunteer staff on the radio in this area.

Respectfully,
Corinne Green
