

Please make set-top boxes which offer advanced communication systems, i.e. e-mail, skype-to-skype, etc. accessible for people with low and no vision. I am gradually losing my remaining vision and need to stay active and involved in my community of Federal Way. I teach adaptive software so that people with low vision can go back to school and back to work. We need to be part of the design equation in our culture. Barriers and isolation cost everyone in the long run.
