

National cyber security is a real issue in need of addressing. In a wired world of ones and zeros (digital bits) action on cyber security legislation by the U.S. Congress and policies by the FCC to assist Internet Service Providers in securing their networks as deemed appropriate are necessary. That being said legitimate privacy concerns need to be taken into account as efforts to protect our nation's wireless and wired networks for Internet access, our electric grid, and other utilities like water systems are implemented.
