

The Keystone XL pipeline will pump tar sands, some of the world's dirtiest fuel, to refineries and ports in Texas, where it will be loaded into tankers and shipped to foreign markets. So environmentally speaking not only does it not benefit us but economically it also harms us. Sure some temporary short-term jobs might be created in the construction industry to build this monstrosity but in the long term it will be devastating. Using the power of the Open Internet I am communicating my message to the State Department and EPA. I urge the FCC to strengthen its existing Open Internet rules and use Title II reclassification to ensure it has legal authority over broadband providers to enforce its Network Neutrality protections.
