

I wish to comment on FCC's activities regarding changes to the universal service funding (USF) contribution

mechanism. I believe the use of a revenues-based method continues to be the fairest, most equitable approach for assessing contribution. I am deeply concerned that changes to above will negatively affect poor and low income populations and that is NOT what this country was founded on. I also request information regarding USF be separate line item on one's telephone bill and not hidden in some other "tax." Please help the people of this country by doing the right thing and not what corporate America wants. Thank you.
