Network evolution

Evolve smarter with the only network that uses both LTE and HSPA+

AT&T has nationwide 4G coverage, bringing faster speeds to more than 200 million Americans. With the introduction of 4G LTE, AT&T is also the only carrier that offers two layers of network technology that deliver 4G speeds: LTE and HSPA+

Why does that matter? You'll enjoy fast 4G speeds on both the HSPA+ network and on the LTE network where available. That means a smoother, more consistent 4G experience overall.

LTE
Long Term Evolution. Speeds up to 10x faster than 3G. That's what we have in mind as we continue to boost speed and performance in more and more places.

HSPA+
Technology that enables 4G speeds up to 4x faster than AT&T's already fast mobile broadband network.*

HSPA
The 3G technology that powers our fast mobile broadband network today.

AT&T 4G Speed

Limited 4G LTE availability in select markets. 4G speeds delivered by LTE, or HSPA+ with enhanced backhaul, where available. Deployment ongoing. Compatible device and data plan required. LTE is a trademark of ETSI. Learn more at [AT&T 4G](#).

AT&T's 4G strategy, including [HSPA+ with enhanced backhaul](#) and LTE, delivers super fast broadband speeds. 4G HSPA+ with enhanced backhaul delivers speeds up to 4X faster than AT&T's already fast mobile broadband network. And as it is deployed, 4G LTE will deliver even faster speeds than 4G HSPA+. The combination of the two technologies provides the best option for your wireless work or entertainment.

HSPA+ Information

4G speeds delivered by HSPA+ (with enhanced backhaul). Not available everywhere with deployment ongoing. Compatible device and data plan required.

AT&T recently upgraded the software of its nationwide mobile broadband network to HSPA+. HSPA stands for "High Speed Packet Access." HSPA+ provides extended and improved network speeds. When HSPA+ is combined with enhanced backhaul, AT&T's already fast mobile broadband network delivers even faster 4G speeds.
