**the Telephone Consumer Protection** )  
 )  
**Act of 1991** )

**Comments of Joe Shields on the Petition**

**For Expedited Clarification and Declaratory Ruling of Revolution Messaging**

I want to thank the Commission for providing the opportunity to comment on the Commission’s Rules and Regulations Implementing the Telephone Consumer Protection Act (TCPA) of 1991. Specifically, the Commission seeks comments on the Revolution Messaging petition for an expedited clarification and declaratory ruling holding that email to text messages are automated calls under the TCPA.

**Email to Text Messages are Autodialed Calls**

Petitioners claim is well founded. Email to text (“ETT”) message calls are autodialed calls under the TCPA. Initiating ETT calls requires the use of a functional equivalent of an auto dialer. An ETT autodialer starts with a database of cellular phone numbers and randomly adds wireless carrier domains to each cellular phone number in the database. The ETT autodialer then stores wireless numbers to be called in a sequential database. Consequently, all devices that initiate ETT message calls are autodialers under the broad TCPA definition of ATDS.

The purpose and history of the TCPA indicate that Congressional intent was to prohibit the use of autodialers to communicate with others in a manner that would be an

invasion of privacy and force a cost on a recipient of the message unless the recipient of the message provided prior express consent.

The Commission should clarify that the TCPA does not exempt prerecorded message calls or text message calls that are initiated through the internet from the prior express consent requirement of the called party.

### **Freedom of Speech**

One particular entity that engages in blatant violations of the TCPA, ccAdvertising, claims they have a freedom of speech right to force costs on the recipient of their messages. In late 2009, Congressman Lamar Smith hired ccAdvertising to initiate 420,000 survey robocalls of which 220,000 went to cell phone numbers **without prior express consent of the called party**. See attached 12/09/2009 Submission for the Record. During the 2012 election, the same company, ccAdvertising, initiated millions of political text messages to cell numbers **also without prior express consent of the called party**. See attached 10/31/2012 Chicago Tribune and the 11/02/2012 The Hill news articles<sup>1</sup>. In both examples the recipients of the messages were forced to carry the costs of receiving the ccAdvertising text messages.

This same entity, ccAdvertising is a commentor on the Revolution Messaging petition. In its defense, for causing others to suffer the cost of these text message calls petitioner claims they have a freedom of speech right to force such costs on others. The commentor, ccAdvertising, suggests that freedom of speech trumps the rights of property owners. Never has any court held that freedom of speech trumps the right of a property owner. “The First Amendment is not a license to trespass, to steal, or to intrude by

---

<sup>1</sup> The ETT spam originated from voteett.com, obamaliesett.com, republicanett.com, vategopett.com, aiccomett.com, informedett.com and reppacett.com all registered by Gabriel Joseph, president of ccAdvertising. See attached web site registrations.

electronic means into the precincts of another person's home or office." *Dietman v. Time Inc.* 449 F.2d 245, 249 (9th Cir. 1971)

The autodialer regulation of the TCPA is a reasonable time, place and manner restriction on speech “The bill I am introducing today falls well within the scope of the first amendment. The first amendment allows the government every right to place reasonable time, place and manner restrictions on speech when necessary to protect consumers from a nuisance and an invasion of their privacy. . . . **The bill does not ban the message; it bans the means used to deliver that message.**” 137 Cong.Rec. S9840 (daily ed. July 11, 1991) (statement of Sen. Hollings).

Every freedom of speech challenge to the TCPA has failed. “The provision in the Telephone Consumer Protection Act of 1991 banning automated, prerecorded calls to residences is content-neutral. Congress adequately demonstrated that such calls pose a threat to residential privacy. The ban is narrowly tailored to advance that interest, and leaves open ample alternative channels of communication. Thus, it does not violate the First Amendment. *Moser v. FCC*, 46 F.3d 970 (9th Cir. 1995), cert. denied, 115 S. Ct. 2615 (1995). (This case reversed *Moser v. FCC*, 826 F. Supp. 360 (D. Oregon 1993) (United States Court of Appeals, Ninth Circuit. Argued and Submitted October 31, 1994. Decided February 6, 1995. See also *Szefczek v. Hillsborough Beacon*, 668 A.2d 1099, 1109 (N.J. Sup. Ct. 1995) (holding TCPA’s ban on prerecorded calls does not violate First Amendment); *cf. Bland v. Fessler*, 88 F.3d 729, 739 (9th Cir. 1996) (holding California statute restricting use of prerecorded calls did not violate First Amendment); *Van Bergen v. Minnesota*, 59 F.3d 1541 (1995) (holding Minnesota statute restricting use of automatic dialing and announcing devices did not violate First Amendment);

*Humphrey v. Casino Marketing Group, Inc.*, 491 N.W.2d 882, 891-92 (Minn. 1992) (holding Minnesota statute restricting use of automatic dialing and announcing devices did not violate First Amendment).

Similarly, there have been dozens of freedom of speech challenges to the junk fax restrictions of the TCPA none of which have ever been upheld. Junk faxers have tried the First Amendment challenges to the junk fax law many times. The highest court to address the question was a panel of judges on the 9th Circuit Court of Appeals in the case called *Destination Ventures v. FCC*, 46 F.3d 54 (9th Cir.1995) In that case, the junk fax law was declared perfectly constitutional, and the junk faxers lost. Junk faxers have now lost their bogus First Amendment arguments in federal courts in Oregon, Texas, Indiana, Minnesota and Missouri.

More importantly, ccAdvertising lost its freedom of speech claims it now relies on in a case brought by the state of North Dakota for autodialed prerecorded political calls. The Supreme Court of North Dakota found that the state autodialer laws did not violate the First Amendment.

Consequently, there is no First Amendment right to force the costs of receiving ETT messages on recipients without first obtaining prior express consent of the called party.

As to the position of ccAdvertising on freedom of speech and cost shifted text messaging, ccAdvertising expects recipients to pay for political text messages: "...political speech is different and citizens may have to bear some cost of receiving

political speech.<sup>2</sup>” The commentor, ccAdvertising, provides no legal basis for such a claim.

### **The TCPA Regulates All Auto Dialed Calls to Cell Phones**

The commentor, ccAdvertising, claims the TCPA does not regulate ETT messages. The TCPA regulates **all** autodialed calls to cell phones. Simply because the calls are for survey or political purposes does not lessen the cost to the recipients or lessen the invasion of privacy caused by the automated messages. “We hold that a voice message or a text message are not distinguishable in terms of being an invasion of privacy.” *Satterfield v. Simon & Schuster, Inc.*, 569 F.3d 946, 951 (9th Cir. 2009)

The true intent of the TPCA is to address ATDS calls no matter the purpose of the call. **IT IS NOT** the **Telemarketing** Consumer Protection Act. **IT IS** the **Telephone** Consumer Protection Act which does not draw a distinction between automated telemarketing, informational, survey or political calls to cellular telephone numbers.

### **Legislative History Is Clear**

The TCPA was enacted to address **all** automated calls to cell phones. Congress knew what it was doing when it defined ATDS:

“It should be noted that the bill's definition of an "automatic telephone dialing system" **is broad**, not only including equipment which is designed or intended to be used to deliver automatically-dialed prerecorded messages, **but also including equipment which has the "capability" to be used in such manner**. The Committee is aware of concerns that this broad definition could cover the mere ownership of office computers which are capable, perhaps when used in conjunction with other equipment, of delivering automated messages.”

H.R. Rep. No. 633, 101st Cong., 2nd Sess. 1990, 1990 WL 259268 (Leg.Hist.)

---

<sup>2</sup> <http://apps.fcc.gov/ecfs/document/view?id=7022064307> page 19 para.1

The device used by ccAdvertising falls squarely in the above description of the definition of ATDS. The ccAdvertising device that indiscriminately blasts millions of text messages has more than just a capability – it actually does randomly combine cell numbers and wireless domain names to create a list used to communicate to cell phones via text messages. That is a pristine example of the capability to randomly or sequentially create and then select a cell phone number to deliver a communication in the form of a text message.

Even though ETT messages originate as an email they must be converted to a message that the cell phone understands as a text message. All ETT messages are converted into text messages, are received as text messages and are charged to the recipient as text messages. Consequently, the recipient does not distinguish any difference on how a text message is initiated – the recipient is charged no matter how the text message is initiated.

Thus the Commission should find that ETT messages are autodialed text message calls under the TCPA.

### **The Can Spam Act**

The Can Spam Act (“CSA”) does not preclude or preempt the applicability of the TCPA to ETT messages: “Nothing in this chapter shall be interpreted to preclude or override the applicability of section 227 of title 47 or the rules prescribed under section 6102 of this title. 15 USC §7712(a)

It should also be noted that the CSA regulates the delivery of email and not text messages. That can be clearly seen by the requirements of the CSA: forging the origination of an email and requiring a physical address of the sender. Obviously text

messages do not have “headers” so one cannot determine if the routing information is deceptive. And the limit on text message size precludes providing a physical address of the sender. What Congress intended to address with the CSA was deceptive sender information (headers) which with text messages there are no headers which could determine if the headers are deceptive.

Clearly, the intent of the CSA was to regulate email that is received as email and not email that is received as a text message.

### **Conclusion**

The use of the internet to initiate prerecorded message calls or text message calls has exploded over the last few years. So has the use of cell phones. Neither is sufficient reason to limit the TCPA from regulating internet initiated prerecorded or ETT messages.

The TCPA was crafted as a consumer protection law to be broadly construed. The definition of ATDS must be broad enough to include all internet initiated prerecorded message calls and ETT message calls. Anything less will open the flood gates to millions of unwanted and collect prerecorded and text message calls.

The Commission should clarify that internet originated prerecorded message calls or ETT message calls fall under the TCPA’s requirement for prior express consent.

Respectfully submitted,

**ccAdvertising** )

**SUBMISSION FOR THE RECORD**

It has come to my attention that the petitioner in the matter is engaging in massive and blatant violations of the TCPA. Enclosed is an article from the Austin American-Statesman from December 4th, 2009 stating that 210,000 cell phones were victims of illegal automated polling calls initiated by the petitioner on behalf of Representative Lamar Smith. See attached article and specifically the highlighted portions on page 2.

The web site of the petitioner substantiates the findings of the article. The web site provides details of obtaining cell phone numbers from dubious "public" sources and obviously without obtaining prior express consent of the cell number subscriber. See attached web page printout and specifically the highlighted portion.

Consequently, I respectfully request that the Commission investigate the massive and blatant violations of the TCPA by the petitioner. Further, I respectfully request that the entity using the petitioner services, Representative Lamar Smith, be advised by the Commission of the TCPA's and Commission regulations for automated calls to cell numbers requiring, without exemption, prior express consent from the cell number subscriber.

Respectfully submitted,

## Cell phones not immune to 'robocalls'

### Candidates seeking to expand reach with calls.

By [Lori Hawkins](#)

AMERICAN-STATESMAN STAFF

Friday, December 04, 2009

Gwen Rowling is accustomed to getting automated calls on her land line, but two automated calls from U.S. Rep. Lamar Smith to her cell phone this week caught her by surprise.

Rowling, an Austin consultant, is one of 210,000 cell phone users who received so-called robo-calls from Smith, a Republican from San Antonio, over the past two weeks as part of a poll on health care reform.

"I'm used to getting these calls on my land line, which is a published number. But I've always guarded my cell number because I pay for the minutes," Rowling said. "I still have no idea how they got my cell number."

As many Americans make cell phones their primary or only telephone, robo-calls to cell phones are becoming more common, telecommunications experts say.

The federal government has banned business telemarketing calls to cell phones. But an exemption in the law lets political candidates make calls to both land lines and cell phones.

And more advanced data-mining technology is making it easier for commercial data brokers to comb the Internet for cell phone numbers.

Often, consumers unwittingly supply the numbers as they enter prize drawings, fill out rebate cards, apply for store credit or make purchases in which the clerk asks for a phone number. Those numbers end up in databases that marketing firms can get.

In some states, the information can be obtained via voter registration databases.

Texans are asked for phone numbers as optional information when they register to vote.

But the state does not share voter phone numbers, said Ashley Burton, a spokeswoman for the Texas secretary of state's office.

Shaun Dakin, founder of the National Political Do Not Contact Registry, a nonprofit advocacy group, said the move toward cell phone robocalls is just beginning.

"We advise consumers that unless you are absolutely required to give a phone number, don't do it. If it's unavoidable, do not give your cell number. If you do, you're putting it out there for everyone."

**Smith's office hired ccAdvertising to handle its automated survey.**

The firm earlier this year said it had compiled 120 million phone numbers from public directories, including for some of the nearly 280 million wireless subscribers.

The firm said it could tailor calls to cell phones by states and ZIP codes.

**Smith's recent survey involved placing 420,000 calls, half to cell phones,** spokesman Brian Baluta said.

The effort was successful in reaching constituents, especially younger people, many of whom don't have land lines, he said.

About 35,000 people answered Smith's questions on cell phones, and about 150 called his office asking not to be called again.

"This was an attempt to reach a new audience, and this allowed us to do that," Baluta said, adding that Smith's office hasn't decided whether to call cell phones again.

Rowling said she called ccAdvertising to have her number removed but has not heard back.

"My fear is that once they have your cell number, more firms will get it from them, and there's no way to take it back," she said.

Staff writer Gardner Selby contributed to this report.

ccAdvertising Launches Mobile Phone Identification Program [More...](#)

## mobile phone identification

22 June 2009

There are now more mobile phone numbers in use in America than landlines. The mobile phone is the communications tool of the present and the future. ccAdvertising is now providing services to its political clients to identify mobile phone numbers for Statewide and Congressional officeholders and candidates.

ccAdvertising master database of 120,000,000 publicly listed phone numbers currently reflects the migration of mobile phone numbers to publicly listed directories. These publicly listed numbers are available as part of ccAdvertising's normal "Artificial Intelligence Call (AIC)" survey processes and services. ccAdvertising its databases to provide mobile phone number identification for its clients:

1. Identification of operational mobile phone numbers by State.
2. Identification of operational mobile phone numbers by Congressional District. Approximate accuracy is that of 5-digit zip code targeting of Congressional Districts.
3. "Artificial Intelligence Call (AIC)" surveys by issues to identified mobile phone numbers.
4. Clients obtain for their unlimited use mobile phone number identification and AIC survey answers to political questions asked.

### Costs:

- 1. Clients are charged by Mobile Phone Number identified.
- 2. Cost per Mobile number identified by State or Congressional District is \$0.10.

### Uses of Data:

- 1. Text Messages.
  - a. Sent free to sender from email programs.
  - b. Sent via short codes as costs to sender from \$0.05 to \$0.20 per message.
  - c. Free to End User. Cost of messages paid for by third party at no cost to recipient.
- 2. Mobile phone video commercials.
- 3. All other uses of traditional political calling including surveys, Smart GOTV and GOTV.

*For more information or to schedule mobile phone identification services by State or Congressional District please contact Gabriel S Joseph III of ccAdvertising at 703/234-2200 or at [gjoseph@ccAdvertising.com](mailto:gjoseph@ccAdvertising.com).*

## Storm of anti-Obama text messages linked to Virginia firm

October 31, 2012 | Alina Selyukh | Reuters

Recommend 19

Tweet 9

2

WASHINGTON (Reuters) - A controversial Virginia marketing and polling firm appears to have used a legal loophole to bombard scores of Americans with unsolicited text messages berating President Barack Obama less than a week before Election Day.

More than a dozen different messages landed on the screens of phone users late on Tuesday, originating from mysterious websites instead of phone numbers. They attacked Obama and Democrats on a variety of issues such as abortion, foreign policy, same-sex marriage and taxation.

The domain names of those websites had been registered with GoDaddy.com through a firm that masks original owners.

On Wednesday, Reuters compiled a list of at least nine websites gathered from reporters who received the political text messages. A review of websites that track domain name registrations revealed that three of the nine websites that sent the messages were registered by Jason Flanary. Those sites had been suspended for spam and abuse.

An email for Jason Flanary indicated he works for ccAdvertising, a division of FreeEats.com Inc. Neither Flanary or the firm returned requests for comment.

CcAdvertising's website says: "All ccAdvertising services are compliant with all Do Not Call regulations and exceptions."

Based in Centreville, Virginia, ccAdvertising is a firm that has represented Republican candidates. It has been fined, sued and pursued for aggressive political pushes that state authorities and private parties have argued violate laws against robo-calls and other types of automated phone contact.

It remains unclear who may have paid for the latest wave of messages and how many people received them.

"If re-elected, Obama will use taxpayer money to fund abortion. Don't let this happen," read one of the messages, which were sent out on Tuesday. "Medicare goes bankrupt in 4000 days while Obama plays politics with senior health," read another.

In 2011, Flanary unsuccessfully ran as a Republican for state Senate in Virginia, and his company was sued

in Fairfax County, for allegedly unleashing thousands of spam texts in the last days of campaigning.

Federal law generally prohibits sending text messages to phone users who did not give prior consent, but does not specifically address non-commercial messages that originate as email, which includes political ones.

That is how ccAdvertising appears to get around the law: Each phone number by default has an attached email address. The spammer can spray emails to those addresses through trial and error. That way the message goes through as an email but appears to the receiver as a text message and, in fact, can cost consumers money if they do not have unlimited data plans.

ccAdvertising and its work are used as an example in a petition to the Federal Communications Commission to specify a ban on spam email-to-text messages, filed earlier this year by Democratic firm Revolution Messaging.

"The FCC makes exemptions for people to be able to send email for political causes, but let's be honest, just because you're adding an email extension and using an email gateway, you still have to find a phone number," said Scott Goodstein, who runs Revolution Messaging.

Goodstein believes that ccAdvertising has been behind political text spam waves in several states this year.

ccAdvertising lists a variety of political and corporate clients on its website, including Americans for Tax Reform, a non-profit run by anti-tax Republican Grover Norquist.

"Americans for Tax Reform has never done this type of unsolicited text messaging with ccAdvertising or any other vendor, and we never will," said spokesman John Kartch, adding that the group has not done business with ccAdvertising "for more than a year" and, in fact, actively opposed Flanary in his state Senate bid.

The FCC and major phone carriers including Verizon and T-Mobile have encouraged users to report spam messages, which can be done by forwarding them to a short phone number 7726 (spells "SPAM").

## GOP ad firm defends anti-Obama texts as protected speech

By Brendan Sasso - 11/02/12 12:05 PM ET

The Republican marketing firm that bombarded people's cellphones with unsolicited anti-Obama text messages this week is undeterred by criticism of the practice, claiming it is protected by its right to free speech.

**Gabriel Joseph, president of Virginia-based ccAdvertising,** told The Hill on Friday that he believes the text messages are an effective campaign tactic and he is open to sending more of them before the election on Tuesday.

"The fact that some people are bothered by this doesn't offend me at all," Joseph said. "It means what we're doing is working. It means it's effective."

Joseph said he sent the messages on behalf of a client, but he declined to name the client or disclose how many messages he sent.

Many people in the Washington, D.C., metro area received the messages, but Joseph wouldn't say whether he targeted a particular region.

He said he obtained the phone numbers from publicly available records, that his firm is "scrupulous" in following the law and that he was only exercising his right to free speech.

"We live in a country called America. We don't live in Russia or China or Iran or Syria where they restrict free speech," Joseph said.

The text messages, sent on Tuesday night, covered a variety of topics, including gay rights, abortion and Medicare, and reached people who had never asked to receive them.

"Obama supports homosexuality and its radical social agenda. Say No to Obama on Nov 6!" one message read.

"The average American pays at least \$2,000 more in taxes than 4 years ago. STOP OBAMA!" read another.

Jonathan Weisman, a reporter for *The New York Times*, tweeted that his 13-year-old daughter received a text reading: "Obama denies protection to babies who survive abortions. Obama is just wrong."

Federal Communications Commission regulations and the Telephone Consumer Protection Act of 1991 prohibit unsolicited auto-dialed text messages.

The law allows for a \$16,000 fine for each illegal message. The rules for text-message spam are stricter than

email spam because text messages are more invasive and can result in extra charges for consumers who do not have unlimited texting on their cellphone plans.

ccAdvertising sent the messages from websites rather than phone numbers.

The FCC is considering a petition that would clarify that the law covers Web-to-phone messages in addition to phone-to-phone messages.

The onslaught of political text messages sparked outrage on Twitter and other social media sites on Tuesday night, as people complained about the unusual campaign tactic.

The Human Rights Campaign, a gay-rights group, sent a letter to the FCC calling for an investigation into the messages, which it called "blatant" violations of the Telephone Consumer Protection Act.

"The TCPA and other laws were created precisely to protect consumers from scammers who send fraudulent messages while hiding behind a cloak of anonymity," the Human Rights Campaign wrote, calling for "swift and forceful action" against ccAdvertising.

GoDaddy, a Web registrar, initially suspended the websites that ccAdvertising used to send the messages, citing spam and abuse.

But Joseph said he has been in contact with GoDaddy and the accounts are no longer suspended.

Joseph claimed that people opted in to receiving political communications when they registered to vote.

He argued that because many people have abandoned landline phones for cellphones, text messages are one of the most effective ways to communicate with voters. He said he has been thrilled with the reaction to his messages.

"You win elections when your opponents react to what you do," he said.

He argued that liberal groups have the same right to send unsolicited text messages and that they would be smart to do so.

"No, I'm not ashamed of it, and I don't shirk away from it," Joseph said. "The articles that have been written have helped my business."

We are very happy to present you IP-Address.org The place where you will find the most powerful IP tracer and IP tracker tools on the Web. All our IP tools are free of charge.

### IP Tools

The idea behind our site is to give you all available IP tools for free which will help you to find out anything what you need to know about owner of any IP address or domain.

### IP Location Finder

The site is still in development and the new IP finder modules will be added to our project in future. Right now you can use any of IP finder modules below:

- [IP Locator](#)
- [What Is My IP](#)
- [Check My IP](#)
- [IP WhoIs](#)
- [Reverse IP Lookup](#)
- [Email Checker](#)
- [Trace Email](#)

### IP Checker

My IP location tracing module below which check IP from your visitors and show IP information's to them is free for use.

We require only to leave credit to our site intact. If you remove credit to us we will block you from using IP location module.

My IP Location Tracking  
Module for your site

Powered by [IP-Address.org](#)

### My IP Location Tracer

To add My IP location tracer module to your site copy script below and place where you would like to appear on your website.

WHOIS, which is a protocol on the net as well as client/ server system to look up the whereabouts of the owner, IP address and the names of the server computer.

What a searcher needs to have is the appropriate reach to the sites that can lead them further to WHOIS database from where they can get the information of that particular range.

For example arin.net helps in searching North American IP addresses, lacnic.net helps for American/ Caribbean servers, ripe.net for European servers, and apnic.net for Asian servers and so on. UNIX operating systems comprise in-built WHOIS client but other operating systems like Windows and MAC needs to download it explicitly.

### WHOIS IP Tracer - Free WHOIS IP Lookup

Our WHOIS IP lookup is absolutely free Whois info tool that helps in finding information about the owner name and telephone number, registration details and list of DNS (Domain name servers that help to convert the site name to requisite IP address) servers within that range.

Up to this everything is perfect; now let's give a thought for private IP addresses or to the gamut of IP addresses taken by any big organizations. In those cases WHOIS needs to take a resort of IANA (Internet Assigned Numbers Authority). Beyond IANA one needs to contact system administrator of that private network for the precise contact to the person.

That is more or less about tracing a particular IP address or tracing the owner of a particular machine via our advanced WHOIS IP lookup tool.

Enter IP Address or Domain and start using our  
Domain Free Who Is IP Lookup Tool

#### IP Whois Lookup

**Notice: If you lookup domain names instead of IP address then only domain names without prefix <http://www> are accepted.**

**Whois IP Lookup not accept: <http://www-ip-address.org> or <http://ip-address.org> or [www-ip-address.org](http://www-ip-address.org)**  
**Whois IP Lookup accept only: [ip-address.org](http://ip-address.org)**

We are very happy to present you IP-Address.org The place where you will find the most powerful IP tracer and IP tracker tools on the Web. All our IP tools are free of charge.

### IP Tools

The idea behind our site is to give you all available IP tools for free which will help you to find out anything what you need to know about owner of any IP address or domain.

### IP Location Finder

The site is still in development and the new IP finder modules will be added to our project in future. Right now you can use any of IP finder modules below:

- [IP Locator](#)
- [What Is My IP](#)
- [Check My IP](#)
- [IP WhoIs](#)
- [Reverse IP Lookup](#)
- [Email Checker](#)
- [Trace Email](#)

### IP Checker

My IP location tracing module below which check IP from your visitors and show IP information's to them is free for use.

We require only to leave credit to our site intact. If you remove credit to us we will block you from using IP location module.

My IP Location Tracking  
Module for your site

Powered by [IP-Address.org](#)

### My IP Location Tracer

To add My IP location tracer module to your site copy script below and place where you would like to appear on your website.

WHOIS, which is a protocol on the net as well as client/ server system to look up the whereabouts of the owner, IP address and the names of the server computer.

What a searcher needs to have is the appropriate reach to the sites that can lead them further to WHOIS database from where they can get the information of that particular range.

For example arin.net helps in searching North American IP addresses, lacnic.net helps for American/ Caribbean servers, ripe.net for European servers, and apnic.net for Asian servers and so on. UNIX operating systems comprise in-built WHOIS client but other operating systems like Windows and MAC needs to download it explicitly.

### WHOIS IP Tracer - Free WHOIS IP Lookup

Our WHOIS IP lookup is absolutely free Whois info tool that helps in finding information about the owner name and telephone number, registration details and list of DNS (Domain name servers that help to convert the site name to requisite IP address) servers within that range.

Up to this everything is perfect; now let's give a thought for private IP addresses or to the gamut of IP addresses taken by any big organizations. In those cases WHOIS needs to take a resort of IANA (Internet Assigned Numbers Authority). Beyond IANA one needs to contact system administrator of that private network for the precise contact to the person.

That is more or less about tracing a particular IP address or tracing the owner of a particular machine via our advanced WHOIS IP lookup tool.

Enter IP Address or Domain and start using our  
Domain Free Who Is IP Lookup Tool

#### IP Whois Lookup

**Notice: If you lookup domain names instead of IP address then only domain names without prefix <http://www>. are accepted.**

Copyright © 2011 - 2012, IP-Address.org - All rights Reserved.

We are very happy to present you IP-Address.org The place where you will find the most powerful IP tracer and IP tracker tools on the Web. All our IP tools are free of charge.

### IP Tools

The idea behind our site is to give you all available IP tools for free which will help you to find out anything what you need to know about owner of any IP address or domain.

### IP Location Finder

The site is still in development and the new IP finder modules will be added to our project in future. Right now you can use any of IP finder modules below:

- [IP Locator](#)
- [What Is My IP](#)
- [Check My IP](#)
- [IP WhoIs](#)
- [Reverse IP Lookup](#)
- [Email Checker](#)
- [Trace Email](#)

### IP Checker

My IP location tracing module below which check IP from your visitors and show IP information's to them is free for use.

We require only to leave credit to our site intact. If you remove credit to us we will block you from using IP location module.

My IP Location Tracking  
Module for your site

Powered by [IP-Address.org](#)

### My IP Location Tracer

To add My IP location tracer module to your site copy script below and place where you would like to appear on your website.

WHOIS, which is a protocol on the net as well as client/ server system to look up the whereabouts of the owner, IP address and the names of the server computer.

What a searcher needs to have is the appropriate reach to the sites that can lead them further to WHOIS database from where they can get the information of that particular range.

For example arin.net helps in searching North American IP addresses, lacnic.net helps for American/ Caribbean servers, ripe.net for European servers, and apnic.net for Asian servers and so on. UNIX operating systems comprise in-built WHOIS client but other operating systems like Windows and MAC needs to download it explicitly.

### WHOIS IP Tracer - Free WHOIS IP Lookup

Our WHOIS IP lookup is absolutely free Whois info tool that helps in finding information about the owner name and telephone number, registration details and list of DNS (Domain name servers that help to convert the site name to requisite IP address) servers within that range.

Up to this everything is perfect; now let's give a thought for private IP addresses or to the gamut of IP addresses taken by any big organizations. In those cases WHOIS needs to take a resort of IANA (Internet Assigned Numbers Authority). Beyond IANA one needs to contact system administrator of that private network for the precise contact to the person.

That is more or less about tracing a particular IP address or tracing the owner of a particular machine via our advanced WHOIS IP lookup tool.

Enter IP Address or Domain and start using our  
Domain Free Who Is IP Lookup Tool

#### IP Whois Lookup

**Notice: If you lookup domain names instead of IP address then only domain names without prefix <http://www>. are accepted.**

**Whois IP Lookup not accept: <http://www-ip-address.org> or <http://ip-address.org> or [www-ip-address.org](http://www-ip-address.org)**  
**Whois IP Lookup accept only: [ip-address.org](http://ip-address.org)**
