

? Interpreter Cutting Off:

If there are any rights for interpreter to stay in 24/7 is good sense because it's access for the deaf to get communicate with other hearing through the videophone. If the interpreters are considering working in 24/5 a weekday, it's not right because it's important for interpreter to be there. If there's any emergency in the weekend, how the deaf can communicate because the deaf using the writing to communicate but it was always get mistake or misunderstand. So, it look like the FCC tried to put deaf in limit because of rates. It's no matter what but I understand with economic problem still running today. We needed interpreter because it's passed in America with Disabilities Act (ADA) so it's always to be there for the communication access for deaf.

? Companies become one APPS, or Software:

I understand there are different kinds of software or hardware. So, the videophone is settled up in different companies. So, it was such as Z4, Z-40, VP200, and Ntouch and another more. So, the hardware is mean to have ware for having VP200, ntouch, and Z-40. It's cool because it's depend on what people's comfortable. Some people like ntouch because it's much better than VP200. Also, another like Z-4 on software because it's can used in computer or laptop and iPad! The reason of people's comfortable and to download with different ways in different videophone companies.

? Fraudulent Calls:

I know that everyone through this ones of prank calls. People has different service to have all same phonebook easier. So, some people don't have and using different phonebook into different service can harm us. It's define that how deaf people have their own access because it's show that deaf need to have rights that under ADA laws.

? Real Life:

The real life is not same the way FCC want. From my understanding that the different of car company can become one company. I am so doubt that because of how people run to have their own prefer of the cars. Also, the phone company can't become one company because it's all about how much that people can afford it or not in the prices. Then, I wonder why does they can't change into one company for the cars, and phone service access. It's not fair for them to feel this way to limited the communication access for all deaf while the another company still running like, cars companies, and phone service. If phone service has only one, then videophone can be one software, and hardware.
