Re: RM-11683, IB Docket No. 12-340

Dear Ms. Dortch:

I believe many of citizens continue to feel the negative effects of our country's economic downturn. The federal government must continue its efforts to help our citizens – especially those less fortunate – with every tool that can help them better their financial future. Broadband technologies are one such tool that can drive innovation, promote investment, create competition and ultimately support economic growth.

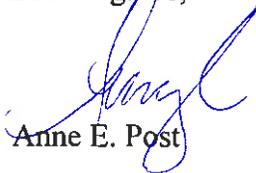

I have recently read about the FCC's focus on finding remedies to the spectrum crunch our nation faces. This is the right path. It's the scarcity of spectrum and the need for more efficient use of spectrum that could hinder our ability to effectively climb out of the recession.

I have become aware about the company LightSquared and their desire to build out a new mobile broadband network. I want to encourage you to support LightSquared's License Modification Application and Petition to help make this new network a reality.

LightSquared's proposal to combine its licensed spectrum with other spectrum utilized by the federal government seems like a good path forward to spur innovation and jobs. In addition, this solution puts to rest any concerns regarding GPS interference.

I hope you will strongly consideration LightSquared's application. Thank you for your time and effort.

Best Regards,

Anne E. Post
